

» From tree to glass

Everything you need to make your own juice or cider

» Anybody can buy it

Speidel provides everything you need so that you can make your own juice or cider from start to finish: from the centrifugal mill by way of the juicer right up to transportation and storage in barrels of high-grade plastic or stainless steel. At www.speidels-hausmosterei.de a film explains more about the process from tree to glass.

» Here's how it works

1 GROWING AND HARVESTING

Depending on the type of juice or drink, the first step is to go out and pick the fruits of your choice. Already here your own juice differs in the quality of purchased juices. Cultivation is in your own hands, completely free of pesticides or other undesirable substances that you don't want to find in your juice.

2 GRINDING

Now the fruit has to be cut first and then squeezed out. It is important to consider the correct cutting size. The fruit must not be cut too roughly, but also not too fine so that a high juice yield and rapid fermentation can be achieved.

With the pome fruit grinder from Speidel you shred your fruit perfectly. It is easy to use and easy to clean. See page 8 for more information.

3 JUICING

After the fruit has been cut up, place the fruit mash into the hydropress to squeeze out the juice. You can either enjoy the fruit juice straight away or process it into must, cider or wine.

Due to the water pressure inside the Hydropress, the fruit mash is pressed through the slotted plate and you get fresh juice. More information about the Hydropress can be found on page 12.

4 STORING OR PROCESSING

If you can't wait any longer, enjoy a glass of freshly squeezed juice and fill the rest into one of the Speidel storage containers.

5 FERMENTING

If you prefer to process your fruit juice into must or cider, simply fill the fresh juice into one of Speidel's fermentation containers. You will find the right container for every kind of beverage in our assortment: be it the must container made of high-quality plastic, the juice container made of stainless steel or the pressure cask.

» Good things from good things

For the perfect juice or must, use only fully ripe and healthy fruit without rotting. Then you are guaranteed to succeed. Wash the fruit well before it goes into the press.

If you're going to make cider, then do it right

» Centrifugal mill

The Speidel centrifugal mill cuts up the fruit in ideal manner: not too coarse and not too fine – just the right size to guarantee you the highest juice yield for ciders.

EASY TO USE

The centrifugal mill can be connected to a standard 230 Volt socket. A large hopper makes it easy to fill the fruit directly from the box. This way an output of up to 1,000 kilograms per hour is possible. Cleaning is simple: Remove the feed hopper and spray the device and hopper with water.

MAINTENANCE-FREE

The centrifugal mill is virtually maintenance-free. Only the blade unit should be sharpened from time to time.

NO RUST EVEN AFTER YEARS OF USE

The hopper, motor block, cutter blades, apron, feet etc. are all made of high quality, rust-free materials requiring neither care nor any special treatment. So you have no rust to worry about even after years of use.

SAFETY IS A TOP PRIORITY

The centrifugal mill complies with all European safety standards (CE mark); it has a protective motor switch which is triggered in case of an overload, a feed hopper with reach-in and switch-on protection and a PE shield to protect the cutters and the motor against any unauthorized interference and against splashing water.

CENTRIFUGAL MILL

Order No.	Width cm	Height cm	Outlet height cm	Weight kg
22200	59	133	38	25

TECHNICAL DETAILS OF CENTRIFUGAL MILL

- › Hopper made of yellow-coloured, robust PE plastic (recyclable)
- › Lower section: made of black-coloured, robust PE plastic (recyclable)
- › Motor: 230 V, 50 Hz, Output 2.2 kW, 2,800 rpm
- › On / Off: Switch with switch-on lock
- › Connection: 230 V, 50 Hz
- › Cutter unit: reversible blades made of hardened stainless steel

ADVANTAGES OF CENTRIFUGAL MILL

- › More power: 2.2 kW
- › No rust on any parts even after years of use
- › Made in Germany
- › Certified food safe

» Under pressure

Due to the water pressure inside the hydropress, the fruit mash is pressed through the slotted plate and you get fresh juice.

A good vintage

» Hydropress

The stainless steel Hydropress not only looks good, it also presses that way. The stainless steel lid with quick-release clamp simplifies operation and the discharge outlet made of stainless steel is quickly and easily cleaned. This makes the pressing of juice, fruit, honeycombs, marinated tobacco or citrus fruit a pure pleasure.

Simply grind pome fruit or crush grapes, berries, etc. and fill them into the Speidel Hydropress, open the water tap and watch how the pressure of the incoming tap water presses the fruit mash from the inside out against the slotted plate.

HIGH JUICE YIELD – LESS WASTE

The rapid pressing and the short flow distance preserve the vitamins; the juice has a wonderful aroma of delicious freshness. Due to the high pressure applied, you achieve an exceptionally high juice yield, even if the press basket is only partially filled.

WITHOUT ELECTRICITY, WITHOUT MUSCLE POWER

An energy-saving, ingeniously simple drive mechanism: Connect up a garden hose to the normal domestic water supply and turn the tap on. The tap water expands the rubber diaphragm inside the press and presses the shredded fruit against the mesh basket. The pressure and pressing time can be regulated by turning on the tap more or less.

» I won't have anything else in the cellar

Speidel isn't the epitome of good quality for nothing. The best materials and precise workmanship guarantee that your containers will give you pleasure for years to come. And therefore also for your juice. Because whoever makes the effort to gather up the fruit also wants to be sure that the work has been worth it.

We have been putting
together fermenters
since 1912

» Round / oval container

Besides the right fruit and a good recipe, the container plays the most important role. It must not only be airtight, but also preserve the aroma and bouquet over many months. Above all, it needs to keep out harmful bacteria that can penetrate via the air and the material of the container. The more airtight the container, the better the must.

Speidel's oval container is one of the most popular must containers. We use only colourless, food grade PE plastic for our oval and round containers. The extra-thick wall preserves the aroma and the alcohol and keeps the must fresh and lively for a long time (as opposed to cheap, thin-walled containers). The large filling dome allows you to clean by hand right into the furthest corners.

ROUND / OVAL CONTAINER MODELS

Capacity l	Order No.	Shape	Length cm	Width cm	Height cm	Ø cm

- › Thick-walled for the best, long-lasting aroma
- › Made in Germany
- › Certified food safe
- › Robust carrying handles

You will find the matching
accessories on page 37

The best for your kids

» Juice container

Using the Speidel juice container, you can store fruit juices for months and tap off some every day without the juice fermenting or becoming bitter. Because of their health value, juices made from apples, pears, black and red currants, raspberries, elderberries and grapes are particularly popular. Each variety can be stored separately or mixed. Water can also be added to make the juice more palatable. If you want, cider or wine that are already fermented can be stored in the juice container.

The container does not need to be full. Because the floating lid adapts to the contents; it always floats on the

top of the juice. As the juice is tapped off, it lowers automatically. A "sealing ring" made of the finest, medical vaseline oil keeps the atmospheric oxygen out. So the juice stays fresh for months. The ancient Romans, too, used to pour oil as an "airlock" on top of their wine to make it keep longer.

With the powerful Speidel flat immersion heater, freshly pressed fruit juice can be directly heated up to 85° or 90 °C and then stored in the same container without racking.

So you save fiddling about with a disposable container and racking the finished juice into bottles.

ADVANTAGES OF JUICE CONTAINERS

- > Drain pipe welded not bolted means perfect hygiene
- > Container with polished, mirror-finish surface means easy cleaning
- > Ventilation slits for optimal ventilation
- > Made in Germany

CONTENTS DELIVERY OF JUICE CONTAINER

- > Stainless steel container with flat bottom, open at top with reinforced edge (approx. 10 mm across)
- > Welded-on threaded connector $\frac{3}{4}$ " to run off clear juice at bottom
- > PE tap $\frac{3}{4}$ ", nom. diam. 10
- > Stainless steel floating lid with spherical knob
- > Stainless steel slip lid with spherical knob and ventilation
- > 1 litre of vaseline oil

Like freshly tapped

» Cider-Keg / Pressure cask

With this versatile pressure cask you can make up to 50 litre of your own drinks, keep them fresh for months and tap some off every day – without heating and without adding chemical preserving agents.

SWEET FRUIT JUICE, MUST OR CIDER

with a variable alcohol level made of apples, pears, berries or grapes. You can decide the alcohol content for yourself: The shorter the cask remains open after filling, the less fermentation sets in and the lower the alcohol content is (max 10 bar due to fermentation).

LOW ALCOHOL SWEET JUICE

made from apples, pears, berries, etc. Almost alcohol-free by adding carbon dioxide: reduced secondary fermentation, month-long freshness (max. 10 bar).

FERMENTED DRINKS

Tap fresh wine, cider, beer and sparkling wine just like in a pub: Only 0.5 to 1 bar carbon dioxide pressure keeps the drink fresh for months and provides the necessary pressure for drawing off. In the case of wine, carbon dioxide avoids excessive sulphurization.

PRODUCE YOUR OWN SODA WATER OR MILD SPARKLING MINERAL WATER

yourself from tap water by adding carbon dioxide. For all those who love soft drinks with low amounts of carbon dioxide and want to save a lot of money. Always the best water quality (in Germany, to some extent, better than that of bottled water), no more dragging crates here and there, and always fresh on tap.

PRESSURE CASK

Capacity l	Order No.	Height cm	Ø cm	Weight kg
50	47014	53	39	12

Our pressure barrel is also suitable for making wine and federweisser

In contrast to casks for beer, the pressure cask designed for pressures up to 10 bar.

ADVANTAGES OF PRESSURE CASK

- › TÜV monitoring for maximum safety
- › Up to 10 bar pressure (beer barrels are only designed for pressure up to 3 bar)

CONTENTS DELIVERY OF PRESSURE CASK

- › Cask
- › Stainless suction tubing with beer pump and stainless steel ball valve with outlet bend
- › Threaded connector with pressure gauge
- › Safety valve
- › Blind plug for gas connection valve

You will find the matching accessories on page 38

One for all

» Fermentation and storage cask made of stainless steel

Stainless steel is the ideal material for casks: It is food safe and absolutely airtight. Neither the air from the outside nor the aroma on the inside can pass through it. Stainless steel has absolutely no effect on the taste and is not attacked by fruit acids. It is easy to clean outside and inside without aggressive cleaning agents.

USE

Because of its versatile uses, we describe our stainless steel fermentation and storage cask as a universal cask. It is ideally suited as juice container or for storing, mixing and transporting various liquids such as wines, juices, liqueurs, syrups, etc.

PERFECT CLEAN

High quality finishes and perfect workmanship make for easy cleaning.

DESIGN

- › Cask made of AISI 304 stainless steel
- › Surfaces inside and outside III d

Don't ruin the fruits of your labour
with a bad container

» Transport, storage, and mashing container

FOOD SAFE

All containers here are made of colourless, UV-resistant PE and thereby comply with EU Regulation 1935 / 2004.

ROBUST

As is usual with Speidel, these containers are particularly thick-walled and therefore extremely robust.

CLEANING

The smooth inner surface ensures that the container is very easy to clean.

TAP TO RUN OFF CLEAR JUICE

The outlet is at the lowest point of the container. This makes it possible to empty it completely.

BASE

The PE base is not only stable, it makes it easy for forklifts and pallet trucks to get under the container.

DIPPING EDGE

The dipping edge acts as an airlock. When filled with liquid, the fermenting mixture inside is protected from bacteria.

» It's all about the details

If you want to achieve a really good result, you won't be halfhearted. If you work with the right tools and a lot of love for detail, you can also taste the difference in the finished must.

Small box, great help

» GÄRSPUNDmobil

With the GÄRSPUNDmobil you can monitor the fermentation process from a distance. It measures the fermentation activity by the number of blips of your fermentation bung and the temperature and sends this data via wireless internet connection to your customer account on myspeidel.com.

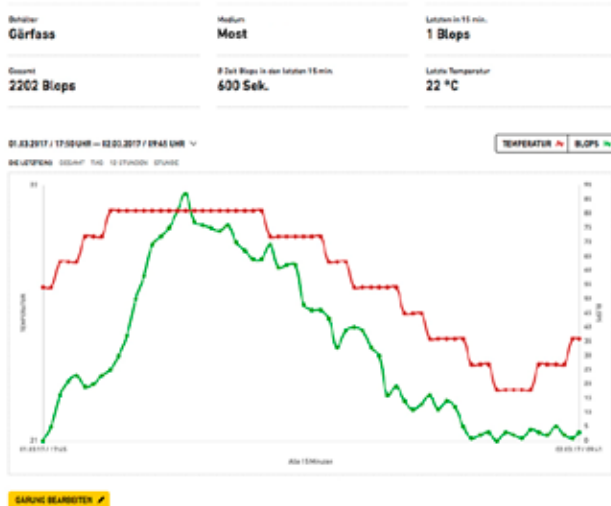

On the right you can see an exemplary fermentation and temperature curve. This makes it easier to predict and plan the expected filling time. You can use the data to find out the connections between fermentation and temperature development and the taste of your must and optimize these processes.

You can find the fermentation bung on page 37 (Order No. 21010)

GÄRSPUNDMOBIL

Order No.	Width cm	Height cm	Weight kg
21100	4	6	0.1

The fermentation curve: That's what a typical fermentation process looks like.

The GÄRSPUNDMobil can be used in combination with stainless steel tanks as well as must containers made of PE

TECHNICAL DETAILS OF GÄRSPUNDMOBIL

- › Measures the fermentation activity by counting the number of Blops of your fermentation lock as well as the temperature
- › Sends these information to MySpeidel via wireless internet connection
- › Network standard: IEEE 802.11 b/g/n

ADVANTAGES OF GÄRSPUNDMOBIL

- › Optimization of the fermentation process and improvement of the finished must or cider
- › Access to My Speidel
- › Online administration of data and recipes
- › LEDs indicate the status of the device

CONTENTS DELIVERY GÄRSPUNDMOBIL

- › Device GÄRSPUNDMobil
- › Thermal detector cable
- › Tank screw connection for the cable
- › Mini-USB to USB cable
- › Without fermentation lock (please order the Speidel fermentation bung separately)

An eggcellent choice

» Fermentation egg

The organic fermentation in the egg-form is based on the golden ratio without corners and edges. Wine, beer and cider could move fluently during the fermentation and storage. This gentle process guarantees on keeping the completely development of the product. The idea of fermentation or aging in the egg is just to come back to the ancient methods

but with the new materials. Already in the ancient times beer has been placed for resting into the egg-formed amphoraes. Recently there were several successful tests for storage wine in the egg-formed fermentation vessels made of concrete. Shortly after Speidel has developed the fermentation egg made of food-safe polyethylene.

FERMENTATION EGG MODELS

Capacity l	Order No.	Height cm	Width cm	Weight kg
60	21090	79	48	8
250	21070	120	76	21
600	21080	157	103	42

ADVANTAGES OF FERMENTATION EGG

- › Suited for the fermentation of wine, beer and must
- › Made of food-safe PE
- › Wine, must and beer can float freely during the fermentation phase and the storage
- › Spontaneous fermentation, more complex and more sophisticated wines and beers
- › The oxygen permeability of the food-safe plastic allows a consistent oxygen impact and thus leads to an ideal process of fermentation and maturation.
- › After the fermentation the smooth surface can be cleaned easily.

CONTENTS DELIVERY FERMENTATION EGG

- › Fermentation egg with lid and socket
- › Without tap and rollsocket

You will find the matching accessories on page 41

Best steel for best quality

» Stainless steel fermentation tanks (pressureless)

Speidel stainless steel fermentation tanks are the professional tanks for ambitious customers. Those who already know their way around and want to carry out fermentation processes at an increased level and in larger quantities are well advised to change from plastic to stainless steel containers. The tanks are the ideal fermentation container for professional production in terms of quality and handling. The smooth inner surfaces are perfectly finished and can be cleaned just as easily after each use.

And thanks to the double cooling jacket and cooling unit connection, they are also excellently suited for precise temperature control in the production process. So if you want to work with a high-quality tank at a high level in the long term, our stainless steel fermentation tanks are the right choice.

STAINLESS STEEL FERMENTATION TANKS (PRESSURELESS) MODELS

» **Everyone is talking about orchards. We make something of them.**

Cider drinkers are conservationists, they say. Because orchards are an increasingly rare cultivated landscape in Europe. By using them, you too are helping to protect this valuable asset.
