

Cabernet Noir

- General:** The vine "Cabernet Noir" was bred in 1991 by the Swiss vine breeder Valentin Blattner. It is a cross between Cabernet Sauvignon and resistance partners.
- Grape:** The grape is short, loose-with small shoulders.
- Berry:** The berry is round, small and covered with a uniform layer of wax. The berry skin is like Cabernet Sauvignon, very firm and therefore very resistant to botrytis.
- Maturity:** The maturity date is very early, in Germany late August and early September, and thus well suited for more northern wine regions.
- Growth:** The growth is moderate and upright. Due to the short Internodes are uniform all the grapes in a horizon of what the eventual defoliation of the work much easier
- Resistance skills:** Good resistance to powdery mildew, downy mildew and botrytis. Very good resistance in winter frosts.
- Taste:** The wine has a subtle Cabernet aroma, reminiscent of Cabernet Franc from. The ripe tannins round out the nice soft flavor profile of this variety.
- Currently:** In November 2011, a name for this species at the European Plant Variety Office CPVO applied for, it is expected spring 2012 will have a name.
- Plant Variety Protection:** Volker Freytag nursery
