

INODOSE GRANULES

SULFUROUS PRODUCTS

Maximum legal authorised dose : see annexe 1B of regulation EC 606/2009

↓ OENOLOGICAL APPLICATIONS

INODOSE GRANULES come in the form of small, white, solid granules (1 to 5 mm) that are odourless.

They release a precise dose of water-dispersible SO₂ into the must or wines, making it easier to carry out the sulphating operation.

INODOSE GRANULES are used particularly during the sulphating of musts and the readjustment of wines before clarification.

↓ INSTRUCTIONS FOR USE

WARNING :

DO NOT USE **INODOSE GRANULES** on wines or mistelles that are already clarified or ready for bottling.

Disperse the **INODOSE GRANULES** on the total surface area of the wines to be treated.

The mass of granules must be adapted to the SO₂ dosage you require and the volume to be treated.

↓ DOSE RATE

Dosage :

Example of readjustment :

Volume of wine to be sulphited = 100 hL

Dose to add = 1g per hL of SO₂

i.e. 100 g of SO₂ for the vat

INODOSE GRANULES to be added = 1 x 100 g SO₂ or 2 x 50 g

↓ PACKAGING AND STORAGE

INODOSE GRANULES come in the form of pre-measured bags.

The various packs are :

- **INODOSE GRANULES** 25 : release 25 g of PURE SO₂.
- **INODOSE GRANULES** 50 : release 50 g of PURE SO₂.
- **INODOSE GRANULES** 100 : release 100 g of PURE SO₂.
- **INODOSE GRANULES** 400 : release 400 g of PURE SO₂.

Use the whole packet quickly once it is open.
